

Fun Bits 3

Colour Blindness: A Problem with Seeing Colours

Some people have problems seeing colours. They cannot tell colours easily. Do you have the same problem? Let's do a simple test!

A Put a tick (✓) or a cross (✗) in each circle.

1. People who have colour blindness cannot see anything.

2. We need to see the doctor when we have problems with our eyes.

3. Some people can only see things in black and white.

Date: _____

People may get colour blindness from their family. For example, you may not see any colours because your mother has the same problem. Some people think that red and green look the same. In this case, they have the red-green colour blindness. A few people even see things only in black and white or grey.

STEAM Highlights

Is it true that a boy may get colour blindness from his father? (Find the answer from the text and check it on p.72.)
