RoboClean – Your Handy Home Cleaner

Who says home cleaning must be troublesome and tiring? With RoboClean, you can finish the daily household chores effortlessly. Just one click and it can do the annoying housework for you!

(i)

RoboClean is an **innovative** vacuum cleaner that helps you dust and mop the floor. It goes around the house **automatically** and sucks up pieces of dirt before cleaning the floor with water and detergent. You can simply sit down on the sofa and rest!

(ii)

The smart RoboClean is **packed with** amazing features. Firstly, it isn't as noisy as traditional vacuum cleaners. You don't have to be disturbed by the morning vacuum noise any more! Besides, it comes in a small size so it requires less storage space. Also, it is eco-friendly. RoboClean runs on solar energy. You only have to leave it under the sunlight and it will recharge itself. No batteries or electricity is needed!

(iii)

The operation is easier than you can imagine. RoboClean monitors its movements using modern laser distance sensors. These sensors act as the 'eyes' of RoboClean. They emit **invisible** laser light to detect what is around the machine. You need not worry that RoboClean will bump into you or your furniture.

(iv)

The laser light emitted is not only invisible but also safe to humans, so there's no risk of receiving harmful **radiation**. When RoboClean detects something which blocks its way, it will move in another direction. RoboClean is child- and pet-friendly—it is perfectly safe to use at homes with children and pets.

Visit Homeware World now to get your RoboClean!

Present this flyer to our staff to enjoy 15% off on your purchase!

Automatically (adv.) means 'a machine or device does something independently, without human control'.
